

Passive Subwoofers

Passive subwoofers are unpowered bass cabinets that require external amplification.

The CASA series targets small to medium venues and mobile setups with compact cabinets and tight, controlled low-end. Stepping up in output and depth, the CUBA series is built for larger venues and live events, delivering fuller, more powerful bass for professional sound reinforcement. For more demanding applications, the CORVA series is engineered for high-power use, providing strong, dynamic low-frequency impact for large venues and high-energy sound environments.

Application Scenarios	Compact dual-8" sub delivering tight, controlled low-end for mobile PA, small venues, or discreet installs where space and punch both matter.	Lightweight and compact, these passive subs are perfect for small to medium PA systems needing punchy bass. Easy to transport and pair with CASA full-range cabinets or other active setups.				CUBA-series subwoofers provide high-power, punchy low-end for venues and events, built tough with easy handling and flexible setup for performance.		Featuring a high-power custom driver and reinforced plywood cabinet, CORVA passive subwoofers deliver reliable performance and strong bass impact at high SPLs. With RMS power handling ranging from 450W to 2000W, they scale effortlessly from mid-size setups to large venues, delivering deep, powerful low-end for demanding live events.
