

# citronic DJ Mixers

DJ mixers are designed for DJs and music playback, offering features ideal for blending tracks and managing audio during performances.

They are typically rack-mountable and include essentials like crossfaders and channel faders for smooth transitions. Many also feature USB connectivity for digital playback or recording, and built-in phono preamps allow use with traditional turntables - great for vinyl lovers. DJ mixers are a staple in clubs, parties, and events where high-quality audio control is key.
