MIDLAND G7 PRO

C1090

After many years of success the glorious MIDLAND G7 - the transceiver most appreciated by fans of outdoor activities and the perfect combination of simplicity and efficiency – renovates and arises in new version “**G7 PRO**”.

As the previous version, the G7 PRO is a robust and **extremely reliable** device that guarantees years of good performances and is an excellent technological solution to communicate in many situations: in professional activities or in leisure time.

The **new and modern design** is the novelty that most affects at a first sight, as well as the **wider LCD display**, where all the icons and the activated functions can be clearly seen.

Thanks to the new case, the radio can be powered in **4 different ways!** Besides the NiMH battery pack, the rechargeable or alkaline batteries, G7 PRO can also use the new (optional) **Li-Ion 1200 battery pack PB-PRO** (cod. C1148) that makes the radio 20% lighter!

Apart from the external design, also the technological core of the radio has been totally renewed so as to improve the functions, the versatility and the performances.

The **Dual PTT** allows to transmit in high or low power so as to prolong the battery life; besides the **Side Tone** function eliminates the annoying rustle at the end of transmissions (this is possible if you communicate with the other radios that are equipped with the same function).

The **audio quality** has been considerably improved to guarantee clearer conversations.

The new case is equipped with an easy access in the battery compartment to facilitate any technical check.

COMPLYING TO CE/99/05

COLOR: Black
